

Lecture 1 Handout: Welcome to EECS 376!

Handouts are not submitted or graded. They're just an optional supplement to lecture.

- Meet your classmates
 - Name & username for 3 classmates?
 1. _____
 2. _____
 3. _____
 - Something you all have in common?

- Something you'll do for self-care this semester

Course Resources

eecs376.org is our central site for the course. Contains links to all other resources, and more (syllabus, lecture recordings, ...)

Use **Piazza** to get your questions answered by course staff.

Gradescope is where you submit your homework.

Course Calendars (linked on Canvas) are google calendars with lecture, discussion, and office hours schedules.

No textbook, but we have **Course Notes** developed for this class with helpful readings

What is the simplest brute-force algorithm you can think of?

Algorithm:

Is this algorithm *efficient*? Why/why not?

Euclid's idea! (actually it was known before Euclid)

Claim: $\gcd(x, y) = \gcd(\text{____}, y)$.

Proof. We'll show that: $L \text{ divides } x \text{ and } y \Leftrightarrow L \text{ divides } \text{____} \text{ and } y$.

1. $(\Rightarrow)$ Suppose L divides both x and y . **Why does this mean L divides ____?**

2. $(\Leftarrow)$ Suppose L divides both ____ and y . **Why does this mean L divides x ?**
